

Make it Happen

How to implement a Tele-Audiology service in
your current Audiology practice

Frances Lockhart

Learning Objectives

Goal :

To develop a change guide and pathway for implementing Person centered Tele-Audiology services in your clinic.

Review: An approach to appreciative enquiry.

Enhancing your current Audiology services with Tele-Audiology services requires a plan.

This plan can be developed using the appreciative enquiry approach discussed in other Ida courses.

Don't worry if you haven't seen this, we will do a quick review of relevant sections now.

Incorporating person centered Tele-Audiology services to enhance your current audiology services involves change and so this is an approach to change that will help that transition.

What is Appreciative Inquiry?

Appreciative Inquiry is the study and exploration of what gives life to human systems when they function at their best.

It is an approach to **personal** change and **organizational** change that is based on the assumption that **questions** and **dialogue** about strengths, successes, values, hopes, and dreams **are themselves transformational**.

(from *The Power of Appreciative Inquiry* by
Diana Whitney and Amanda Trosten-Bloom)

The Appreciative Approach

Appreciative Approach	Traditional Approaches
<ul style="list-style-type: none">• Change happens continuously• Focuses on strengths• Creates change through shared understanding and collaboration• Helps develop personal motivation• Creates change through conversation• Takes a bottom-up approach involving all participants in the change process	<ul style="list-style-type: none">• Change consists of separate challenges to be overcome• Focuses on weaknesses• Creates change through a linear process: identify the problem, find a solution, implement the change• Human aspects are often neglected• Takes a top-down approach

Personal Change Guide Overview

5 Step Process

Using your investigation guide developed in part 3 as a resource

Session 1: Determine what Goals you have for your Tele-Audiology service

Session 2: Identify factors that can help or hinder you from integrating a Tele-Audiology service.

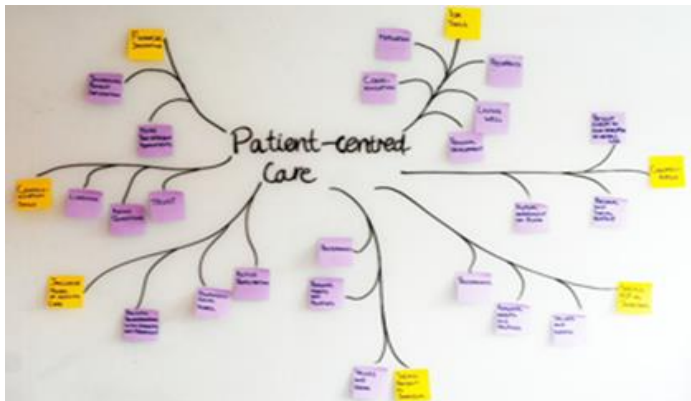

Session 3: Identify which stages of the client journey that you want to enhance with Tele-Audiology and create concrete action steps that will help achieve your goals

Session 4: Conduct short-evaluations of your change process to keep the enthusiasm going, on a weekly or daily basis

Session 5: Evaluate your long-term process

Step 1: What Goals do I have for my Tele-Audiology service.

1. Answer the question: What stages of the Ida circle would I be able to make more person centered by providing Tele-Audiology services?
2. Draw a mind map of your current services along the patient journey and where your goals of a Tele-Audiology service would fit in to ensure the patient is at the centre of the care.

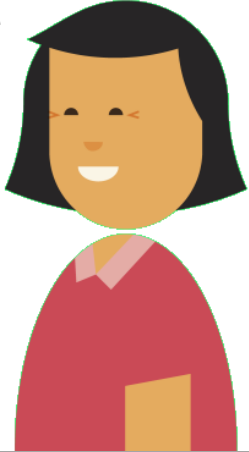

1. Imagine your Tele-Audiology service? What would your practice be like if you incorporated this service most of the time?

Step 2: Helps and Hindrances

Well, I think it is helpful that we already

What factors may help or hinder my Tele-Audiology service?

Write down the factors:

Helps:

Hindrances:

.....

.....

.....

.....

.....

.....

YOU

CHANGE GUIDE

Step 2: Turn Hindrances into Helps

CHANGE GUIDE

Now, think about how each of your hindrances can be overcome, and add the answer to your list of helps. Select the 5-8 most important helps on your list

Example of turning hindrances into helps:

Hindrance: Current staff aren't confident using web-conferencing.

Help: Set up training or mentoring scheme with colleagues to practice web conferencing.

The selected helps will become your **focus points** for creating change

Step 3: Rate Your Change

Now add your 5-8 top focus points to the Spiderweb copy and rate each focus point on a scale from 1-5 based on the extent to which you believe each focus point would be easy to implement

CHANGE GUIDE

1 = not easy at all – 5 = very easy

enter the 5-8 top focus points in the Tool and then use the following question in your spider web exercise:

On a scale from 1-5, to what extent do you think these focus points could be easily implemented once developed within the clinic today?"

[Spider Web Tool](#)

Example: Ida spider web survey on implementing Tele-Audiology

Step 3: Prioritize Your Change

Reflect on your Spiderweb result and think about what is most important for you to focus on to create the change you wish to see. Then write a list of action steps you can begin to take right away.

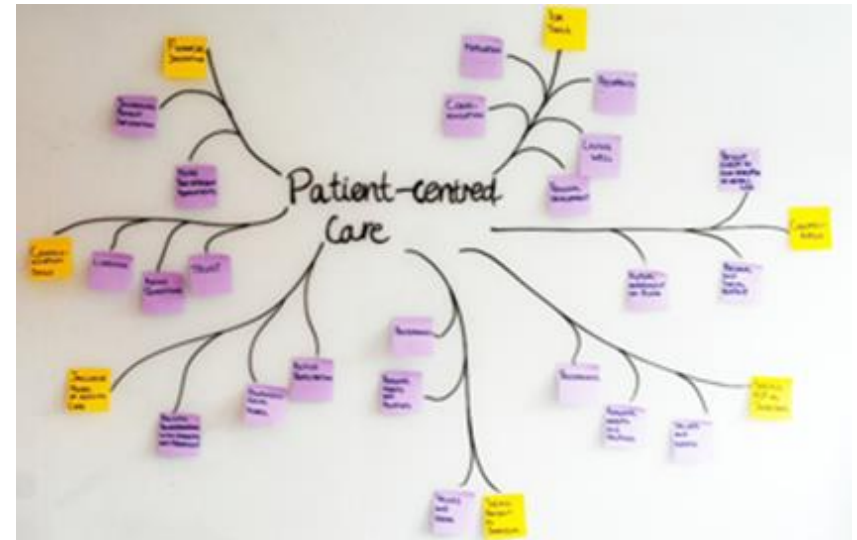

Action steps:

-
-
-
-
-

CHANGE GUIDE

Step 3: Envision Your Changed Practice

Think about what your daily practice will be like once you have implemented your action steps. How does that compare with your mind map?

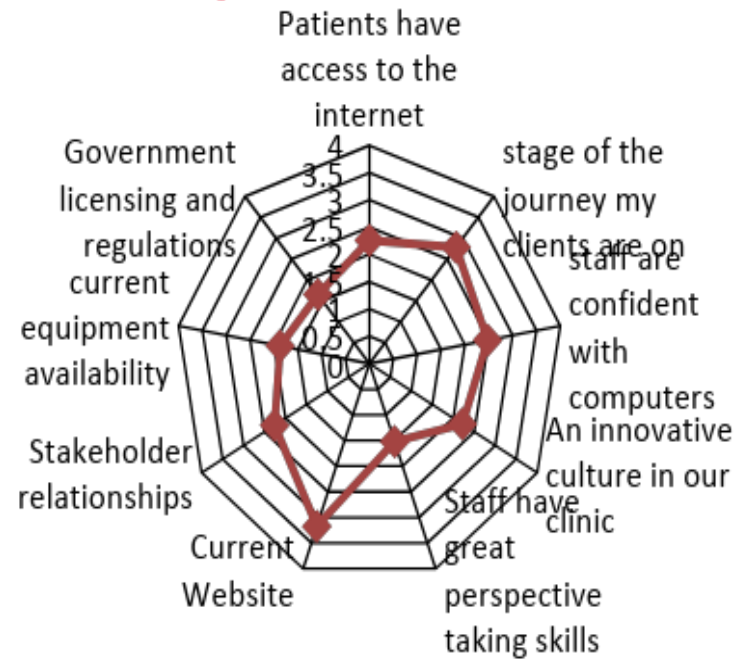

CHANGE GUIDE

Step 4: Evaluate Your Change

**The Ida Triangle Tool
for short-term change
evaluation**

**The Ida Spiderweb tool
for long-term change
evaluation**

Embrace the Change

Enjoy your new Tele-Audiology services and share your stories with others to show how effective this style of service can be in staying person centred and providing best practice care.
